

Amendments to the Claims:

This listing of claims will replace all prior versions and listings of claims in the application:

Listing of Claims:

- 1 1. (Currently Amended) A web server architecture comprising a web interface for providing
2 a plurality of data transmission paths to the web and directly between the web interface
3 and the web, wherein at least one of the plurality of data transmission paths is an
4 unrestricted data transmission path and wherein at least one other of the plurality of data
5 transmission paths is a restricted data transmission path.
- 1 2. (Currently Amended) The web server architecture of claim 1, wherein the restricted data
2 transmission path comprises a ~~fire-wall~~ firewall device for preventing the transmission of
3 unauthorized data.
- 1 3. (Currently Amended) The web server architecture of claim 1, wherein the web server
2 interface discriminates sensitive data and routes the data to the restricted data
3 transmission path.
- 1 4. (Withdrawn-Currently Amended) The web server architecture of claim 1, wherein the
2 web interface comprises a plurality of web servers ~~couple~~ coupled together through a
3 local bus network.
- 1 5. (Withdrawn-Currently Amended) The web server architecture of claim 4, further
2 comprising a file server, at least one application server and a ~~data-base-couple~~ database
3 coupled to each other and the plurality of web servers through the local bus network.
- 1 6. (Withdrawn-Currently Amended) The web server architecture of the claim 5, further
2 comprising a control box ~~couple~~ coupled to each of the plurality of web server, the file
3 server, the at least one application server, and the ~~data-base~~ database for monitoring their
4 physical condition.

- 5 7. (Withdrawn-Currently Amended) The web server architecture of claim 5, wherein local
6 bus network comprises a pre-configured wire harness for providing physical
7 connectivities ~~of to~~ each of the plurality of web servers, the file server, the at least one
8 application server and the data base to the local bus network.
- 1 8. (Withdrawn-Currently Amended) The web server architecture of claim 7, wherein the
2 ~~preconfigured~~ pre-configured wire harness comprises a switch for switching the
3 connectivities of the at least one application server with the connectivities of one of the
4 plurality of web servers.
- 1 9. (Withdrawn-Currently Amended) The web server architecture of claim 5, wherein the file
2 server stores configuration files for programing each of the plurality of web servers, the at
3 least one application server and the ~~data-base~~ database.
- 1 10. (Withdrawn-Currently Amended) The web server architecture of claim 9, wherein the file
2 server automatically and periodically programs each of the plurality of web servers and
3 the at least one application server ~~to perform~~.
- 1 11. (Withdrawn-Currently Amended) ~~[[An]]~~ A method ~~for of~~ building a web server support
2 system comprising the steps of:
3 a. providing a network bus configured to support data transmissions between system
4 components and a ~~files~~ file server;
5 b. downloading configuration files corresponding to each type of system component
6 ~~in-to~~ into the file server; and
7 c. transmitting the configuration ~~file~~ files corresponding to each type of system
8 component, wherein transmitting the configuration ~~file~~ files corresponding to each
9 type of system component programs each component to perform a ~~predetermined~~
10 pre-determined function.
- 1 12. (Withdrawn) The method of claim 11, wherein the step of downloading configuration
2 files corresponding to each type of system component into the file server is initiated from
3 a remote location and over the web.

4 13. (Withdrawn-Currently Amended) The method of claim 12, wherein the step of
5 transmitting the configuration ~~file~~ files corresponding to each type of system component
6 is initiated by each type of system component.

1 14. (Currently Amended) A method of ~~efficient~~ efficiently transmitting data between the web
2 and a web server network having a plurality of web servers, the method comprising the
3 steps
4 a. discerning sensitive data and non-sensitive data;
5 b. routing non-sensitive data through a non-restricted pathway directly between the
6 web and the web server network; and
7 c. routing sensitive data through a restricted pathway between the web and the web
8 server network, wherein the restricted pathway comprises a firewall device
9 located between the web and the web server network.

1 15. (Withdrawn-Currently Amended) An auto-programing web support system for supporting
2 a web site, the system comprising:
3 a. a plurality of web servers;
4 b. a plurality of application servers;
5 c. a file server for storing configuration files from programing the plurality of web
6 servers and the plurality of application servers;
7 d. a ~~data base~~ database;
8 e. a system network for providing the connectivities between the file server, the
9 plurality of web servers, the plurality of application servers and the ~~data base~~
10 database and for transmitting the configuration files from the file server to the
11 plurality of web servers and the plurality of application servers, wherein
12 transmitting the configuration files from the file server to the plurality of web
13 servers and the plurality of application servers programs the plurality of web
14 servers and the plurality of application servers; and
15 f. a connection means for connecting the plurality of web servers to the web and
16 through which data is transmitted between the plurality of web servers and the
17 web.

- 1 16. (Withdrawn-Currently Amended) The system of claim 15, wherein the system network
2 includes a wire harness providing predetermined connectivities for each of the web
3 servers and application servers.
- 1 17. (Withdrawn-Currently Amended) The system of claim 15, wherein each of the plurality
2 of web servers and plurality of application servers is programed according to a
3 predetermined function ~~with~~ as determined by the server's serial number.
- 1 18. (Withdrawn-Currently Amended) The system of claim 15, wherein the configuration files
2 are ~~down loaded~~ download to the file server over the web from a remote location.
- 1 19. (Withdrawn-Currently Amended) The system of claim 15, wherein the system further
2 includes a control unit that monitors the physical condition of the plurality of web servers
3 and plurality of application servers.
- 1 20. (Withdrawn-Currently Amended) The system of the claim 19, wherein the control unit
2 initiates an alarm in the event that the physical condition of any one web ~~servers~~ server of
3 the plurality of web servers and an application ~~servers~~ server of the plurality of
4 application servers jeopardizes its functionality.
- 1 21. (Currently amended) The method of the claim 14, further comprising connection means
2 for connecting the system to the web ~~comprises~~ comprising a plurality of data
3 transmission pathways for transmitting data between the system and the web.
- 1 22. (Currently amended) The method of claim 21, wherein one of the data transmission
2 pathways comprises a firewall.
- 1 23. (Currently amended) The method of the claim 21, wherein discriminating sensitive data
2 and routing the sensitive data to the transmission pathways ~~comprising~~ includes directing
3 the sensitive data through the firewall.
